On a long lonely night

Sko & Torp

Guitar akkorder

```
E                                    F#m                                        A
I´ve been wondering where you - where you´re gone
been such a long time
                                                                          E
and I´ve been living alone for way too long.
E                      F#m                    A
You been out all night fooling around
with a bunch of bad guys
                     B                                 E
you know I hate it when you not near.

                            G#m                    A
Well I miss you so much pretty lady
you know that I do
                               B
and I wish you´d come home
                           E
but you´re not near
B
how could you walk away
             A                     G#m
when i needed you so
 A                           B
now you make me cry
                            E
on a long lonely night.

I´ve been wondering how you- you could go
just gone and left me baby
you turned me on and then left me on my own
when the light of the day
breaks thrugh my window
illuminating where you use to lay.

F#m                                          C#   B G#  B  A
I wonder if you´ll ever come back into my life
 G#m                                          A
I wonder where you´ve been so long
                   F#m               A                       E
don´t you miss me like I miss you little miss.
```
